

FOR IMMEDIATE RELEASE

12 May 2008

OBDS to provide Electronic Checklist (ECL) support for Rockwell Collins' Pro Line 21 integrated avionics systems.

On-Board Data Systems (OBDS.com) of Mirabel Quebec announced a new Licensing agreement with Rockwell Collins of Cedar Rapids, Iowa, to support the company's Pro Line 21 Electronic Checklist systems.

Tom Murray of OBDS says: "Our many customers are familiar and comfortable with the web-based ECL update system that they have used in many other aircraft. They appreciate the convenience and security of a common content management system under central revision control. This new license completes a spectrum of such content services for both MFD and EFB and enhances the integrated Pro Line 21 features..

There are clear benefits for Rockwell Collins clients who are receiving new aircraft equipped with this capability. The OBDS service includes a professionally formatted and managed ECL system implemented from day one of their operation. This allows maximum benefit from the ECL as a cockpit safety and CRM tool.

Airframe OEMS may also benefit from a dedicated organization such as OBDS helping to maintain the baseline ECL content in parallel with AFM changes with a formal and proven content management system.

OBDS services are compliant with guidelines for managing ECL as set out in FAA AC120-64, and related regulatory requirements for paperless operations.
